SUMMARY

Data Scientist with a Master's degree in Data Science from Université Sorbonne Paris Nord (Mention Bien). Six-month AI research internship at LUSAC (Université de Caen Normandie), building multi-horizon time-series forecasting pipelines on climate data, from data collection to model benchmarking. Hands-on experience in deep learning, computer vision (YOLO, Deep SORT) and LLM applications (RAG, Transformers). Looking PHD position.

TECHNICAL SKILLS

Programming: Python (advanced), SQL, C, Bash

GenAI & LLMs: Transformers, BERT, GPT, ViLT (multimodal), prompt engineering, RAG, embeddings, FAISS, ChromaDB (Hugging Face)

Agentic AI: AI agents & workflow automation, tool / API integration, multi-agent orchestration, agent evaluation & guardrails (LangChain, LangGraph, CrewAI, MCP)

MLOps & Cloud: Docker, FastAPI, REST APIs, Streamlit, MLflow, AWS, Git / GitHub, CI/CD

Machine Learning: regression, classification, clustering, ensemble methods, hyperparameter tuning (scikit-learn)

Deep Learning: TensorFlow, Keras, PyTorch

Computer Vision: CNN, ViT, YOLO, Deep SORT, object detection, multi-object tracking, image segmentation (OpenCV)

Time-Series Forecasting: LSTM, GRU, SARIMA, multi-horizon forecasting (skforecast, statsmodels)

Data Engineering: pandas, NumPy, ETL/ELT, Talend, Data Warehouse, data modelling, Power BI

Methodologies: Agile, Scrum, Kanban, A/B testing

PROFESSIONAL EXPERIENCE

AI Research Intern – Time-Series Forecasting **Feb 2026 – Aug 2026**

LUSAC, Université de Caen Normandie *Saint-Lô, France*

- Designed and implemented an end-to-end deep-learning pipeline for multi-horizon daily air-temperature forecasting across 3 cities in Normandy (Manche),
- Benchmarked SARIMA, Random Forest, XGBoost, LSTM and GRU against persistence and climatology baselines.
- Compared recursive vs. direct multi-horizon strategies; automated data collection, cleaning and feature engineering, and built reusable evaluation utilities and diagnostic dashboards.

PROJECTS

Real-Time Object Detection & Tracking — *Bachelor's final-year project, 2024 · Python, YOLO, Deep SORT, OpenCV, Tkinter*

Built a real-time video tracking system combining YOLO detection with Deep SORT multi-object tracking across 8 custom object classes, trained on custom datasets, Added a Tkinter GUI for video loading, live visualization of tracked objects and trajectory display.

Local RAG Assistant for Document Analysis — *Python, LangChain, Hugging Face, FAISS, ChromaDB, local LLM*

Built a fully local retrieval-augmented generation pipeline: PDF ingestion and chunking, embedding generation, vector indexing, semantic search and LLM-based answer generation, with no external API dependency.

Multimodal Click-Through Rate Prediction — *Python, PyTorch, Transformers, ViLT, PCA, FiBiNET*
Fused textual, visual and user-history signals to predict click-through probability: joint text-image embeddings with ViLT, PCA dimensionality reduction and a FiBiNET model for feature-interaction learning.

EDUCATION

Master's Degree in Computer Science – Data Science — Mention Bien **2024 – 2026**
Université Sorbonne Paris Nord — Institut Galilée *Villetaneuse, France*

- Coursework: Machine Learning & Deep Learning, LLMs & Web Mining, NLP, Data Mining, Business Intelligence, Visual Analytics, Intelligent Image Exploration.

Bachelor's Degree in Mathematics & Computer Science — Mention Bien **2021 – 2024**
Faculty of Sciences Dhar El Mahraz, Sidi Mohamed Ben Abdellah University *Fez, Morocco*
